### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 04 June 2002.

## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election of group 1 in Paper No. 8 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 21-25 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 9.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily

Art Unit: 3738

published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-2, 5-8, 11-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Riesser et al (6,387,129). Referring to figure 3, Riesser et al teaches a fixation screw for fastening a graft ligament within a bone tunnel having a proximal end canted relative a longitudinal axis. See reasoning for canted end in column 4, lines 7-11.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3-4, 9-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Riesser et al (6,387,129) in view of Sutter et al (4,484,570).

Riesser et al teaches the screw as described above, however, is silent regarding apertures in the sidewall. Sutter et al teaches a screw having apertures 11e in the sidewall. It would have been obvious to one having ordinary skill in the art to have utilized the apertures of Sutter et al with the screw of Riesser et al such that bone material will grow into them which makes the screw become very stably anchored within the bone. See column 6, lines 29 et seq.

Art Unit: 3738

Regarding the distal end defining a plane normal to the axis, see figure 2 of Sutter et al.

Claims 15-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Riesser et al (6,387,129) (and Sutter et al (4,484,570) when necessary) in view of Sklar et al (5,899,938).

Riesser et al and Sutter et al teach a screw as described above, however, they are silent regarding the screw being a part of an assembly including a tubular body comprising a deformable wall. Sklar et al teaches a tubular body 22 for anchoring a ligament being portion of an assembly. It would have been obvious to one having ordinary skill in the art to have the tubular body of Sklar et al with the screw of Riesser et (and Sutter et al) to better contain the ligament such that it is easier to handle and install, and better anchor it within a bone cavity.
